## Introduction

Reactome is open-source, open access, manually curated and peer-reviewed pathway database. Pathway annotations are authored by expert biologists, in collaboration with Reactome editorial staff and cross-referenced to many bioinformatics databases. A system of evidence tracking ensures that all assertions are backed up by the primary literature. Reactome is used by clinicians, geneticists, genomics researchers, and molecular biologists to interpret the results of high-throughput experimental studies, by bioinformaticians seeking to develop novel algorithms for mining knowledge from genomic studies, and by systems biologists building predictive models of normal and disease variant pathways.

The development of Reactome is supported by grants from the US National Institutes of Health (P41 HG003751), University of Toronto (CFREF Medicine by Design), European Union (EU STRP, EMI-CD), and the European Molecular Biology Laboratory (EBI Industry program).

Reactome database release: 74

This document contains 1 pathway and 4 reactions ([see Table of Contents](#))

## Interleukin-2 signaling ↗

**Stable identifier:** R-BTA-9020558

**Inferred from:** [Interleukin-2 signaling \(Homo sapiens\)](#)

This event has been computationally inferred from an event that has been demonstrated in another species.

The inference is based on the homology mapping from PANTHER. Briefly, reactions for which all involved PhysicalEntities (in input, output and catalyst) have a mapped orthologue/paralogue (for complexes at least 75% of components must have a mapping) are inferred to the other species. High level events are also inferred for these events to allow for easier navigation.

[More details and caveats of the event inference in Reactome.](/electronic_inference_compara.html) For details on PANTHER see also: <http://www.pantherdb.org/about.jsp>

## IL2RB binds JAK1 ↗

**Location:** [Interleukin-2 signaling](#)

**Stable identifier:** R-BTA-451900

**Type:** binding

**Compartments:** cytosol, plasma membrane

**Inferred from:** [IL2RB binds JAK1 \(Homo sapiens\)](#)

This event has been computationally inferred from an event that has been demonstrated in another species.

The inference is based on the homology mapping from PANTHER. Briefly, reactions for which all involved PhysicalEntities (in input, output and catalyst) have a mapped orthologue/paralogue (for complexes at least 75% of components must have a mapping) are inferred to the other species. High level events are also inferred for these events to allow for easier navigation.

[More details and caveats of the event inference in Reactome.](/electronic_inference_compara.html) For details on PANTHER see also: <http://www.pantherdb.org/about.jsp>

## JAK3 binds JAK3 inhibitors ↗

**Location:** [Interleukin-2 signaling](#)

**Stable identifier:** R-BTA-9679028

**Type:** binding

**Compartments:** cytosol

**Inferred from:** [JAK3 binds JAK3 inhibitors \(Homo sapiens\)](#)

This event has been computationally inferred from an event that has been demonstrated in another species.

The inference is based on the homology mapping from PANTHER. Briefly, reactions for which all involved PhysicalEntities (in input, output and catalyst) have a mapped orthologue/paralogue (for complexes at least 75% of components must have a mapping) are inferred to the other species. High level events are also inferred for these events to allow for easier navigation.

## PTK2B binds JAK3 ↗

**Location:** [Interleukin-2 signaling](#)

**Stable identifier:** R-BTA-508513

**Type:** binding

**Compartments:** cytosol

**Inferred from:** [PTK2B binds JAK3 \(Homo sapiens\)](#)

This event has been computationally inferred from an event that has been demonstrated in another species.

The inference is based on the homology mapping from PANTHER. Briefly, reactions for which all involved PhysicalEntities (in input, output and catalyst) have a mapped orthologue/paralogue (for complexes at least 75% of components must have a mapping) are inferred to the other species. High level events are also inferred for these events to allow for easier navigation.

[More details and caveats of the event inference in Reactome.](/electronic_inference_compara.html) For details on PANTHER see also: <http://www.pantherdb.org/about.jsp>

**Followed by:** [PTK2B is phosphorylated](#)

## PTK2B is phosphorylated ↗

**Location:** [Interleukin-2 signaling](#)

**Stable identifier:** R-BTA-508451

**Type:** omitted

**Compartments:** cytosol

**Inferred from:** [PTK2B is phosphorylated \(Homo sapiens\)](#)

This event has been computationally inferred from an event that has been demonstrated in another species.

The inference is based on the homology mapping from PANTHER. Briefly, reactions for which all involved PhysicalEntities (in input, output and catalyst) have a mapped orthologue/paralogue (for complexes at least 75% of components must have a mapping) are inferred to the other species. High level events are also inferred for these events to allow for easier navigation.
