Fusion of vesicle containing the HA trimer, NA tetramer and M2 tetramer to the Golgi apparatus

Rush, MG., Squires, B., Steel, J.
Introduction

Reactome is open-source, open access, manually curated and peer-reviewed pathway database. Pathway annotations are authored by expert biologists, in collaboration with Reactome editorial staff and cross-referenced to many bioinformatics databases. A system of evidence tracking ensures that all assertions are backed up by the primary literature. Reactome is used by clinicians, geneticists, genomics researchers, and molecular biologists to interpret the results of high-throughput experimental studies, by bioinformaticians seeking to develop novel algorithms for mining knowledge from genomic studies, and by systems biologists building predictive models of normal and disease variant pathways.

The development of Reactome is supported by grants from the US National Institutes of Health (P41 HG003751), University of Toronto (CFREF Medicine by Design), European Union (EU STRP, EMI-CD), and the European Molecular Biology Laboratory (EBI Industry program).

Reactome database release: 71

This document contains 1 reaction (see Table of Contents)
Fusion of vesicle containing the HA trimer, NA tetramer and M2 tetramer to the Golgi apparatus

**Stable identifier:** R-HSA-168871

**Type:** transition

**Compartments:** Golgi membrane, endocytic vesicle membrane

**Diseases:** influenza

Once the transport vesicle arrives at the golgi apparatus, it docks and dumps its contents into the golgi lumen.
