Introduction

Reactome is open-source, open access, manually curated and peer-reviewed pathway database. Pathway annotations are authored by expert biologists, in collaboration with Reactome editorial staff and cross-referenced to many bioinformatics databases. A system of evidence tracking ensures that all assertions are backed up by the primary literature. Reactome is used by clinicians, geneticists, genomics researchers, and molecular biologists to interpret the results of high-throughput experimental studies, by bioinformaticians seeking to develop novel algorithms for mining knowledge from genomic studies, and by systems biologists building predictive models of normal and disease variant pathways.

The development of Reactome is supported by grants from the US National Institutes of Health (P41 HG003751), University of Toronto (CFREF Medicine by Design), European Union (EU STRP, EMI-CD), and the European Molecular Biology Laboratory (EBI Industry program).

Reactome database release: 73

This document contains 6 pathways and 5 reactions ([see Table of Contents](#))

Biosynthesis of DHA-derived SPMs ↗

Stable identifier: R-MMU-9018677

Inferred from: Biosynthesis of DHA-derived SPMs (Homo sapiens)

This event has been computationally inferred from an event that has been demonstrated in another species.

The inference is based on the homology mapping from PANTHER. Briefly, reactions for which all involved PhysicalEntities (in input, output and catalyst) have a mapped orthologue/paralogue (for complexes at least 75% of components must have a mapping) are inferred to the other species. High level events are also inferred for these events to allow for easier navigation.

[More details and caveats of the event inference in Reactome.](/electronic_inference_compara.html) For details on PANTHER see also: <http://www.pantherdb.org/about.jsp>

Ac-PTGS2 dimer oxidises DHA to 17(R)-Hp-DHA ↗

Location: [Biosynthesis of DHA-derived SPMs](#)

Stable identifier: R-MMU-9020261

Type: transition

Compartments: cytosol

Inferred from: [Ac-PTGS2 dimer oxidises DHA to 17\(R\)-Hp-DHA \(Homo sapiens\)](#)

This event has been computationally inferred from an event that has been demonstrated in another species.

The inference is based on the homology mapping from PANTHER. Briefly, reactions for which all involved PhysicalEntities (in input, output and catalyst) have a mapped orthologue/paralogue (for complexes at least 75% of components must have a mapping) are inferred to the other species. High level events are also inferred for these events to allow for easier navigation.

[More details and caveats of the event inference in Reactome.](/electronic_inference_compara.html) For details on PANTHER see also: <http://www.pantherdb.org/about.jsp>

ALOX15 oxidises DHA to 17(S)-Hp-DHA ↗

Location: [Biosynthesis of DHA-derived SPMs](#)

Stable identifier: R-MMU-9020275

Type: transition

Compartments: cytosol

Inferred from: [ALOX15 oxidises DHA to 17\(S\)-Hp-DHA \(Homo sapiens\)](#)

This event has been computationally inferred from an event that has been demonstrated in another species.

The inference is based on the homology mapping from PANTHER. Briefly, reactions for which all involved PhysicalEntities (in input, output and catalyst) have a mapped orthologue/paralogue (for complexes at least 75% of components must have a mapping) are inferred to the other species. High level events are also inferred for these events to allow for easier navigation.

[More details and caveats of the event inference in Reactome.](/electronic_inference_compara.html) For details on PANTHER see also: <http://www.pantherdb.org/about.jsp>

Followed by: [ALOX15 dehydrogenates 17\(S\)-Hp-DHA to 16S,17S-epoxy-DHA](#)

ALOX15 dehydrogenates 17(S)-Hp-DHA to 16S,17S-epoxy-DHA ↗

Location: [Biosynthesis of DHA-derived SPMs](#)

Stable identifier: R-MMU-9024881

Type: transition

Compartments: cytosol

Inferred from: [ALOX15 dehydrogenates 17\(S\)-Hp-DHA to 16S,17S-epoxy-DHA \(Homo sapiens\)](#)

This event has been computationally inferred from an event that has been demonstrated in another species.

The inference is based on the homology mapping from PANTHER. Briefly, reactions for which all involved PhysicalEntities (in input, output and catalyst) have a mapped orthologue/paralogue (for complexes at least 75% of components must have a mapping) are inferred to the other species. High level events are also inferred for these events to allow for easier navigation.

Biosynthesis of aspirin-triggered D-series resolvins ↗

Location: Biosynthesis of DHA-derived SPMs

Stable identifier: R-MMU-9020265

Inferred from: Biosynthesis of aspirin-triggered D-series resolvins (Homo sapiens)

This event has been computationally inferred from an event that has been demonstrated in another species.

The inference is based on the homology mapping from PANTHER. Briefly, reactions for which all involved PhysicalEntities (in input, output and catalyst) have a mapped orthologue/paralogue (for complexes at least 75% of components must have a mapping) are inferred to the other species. High level events are also inferred for these events to allow for easier navigation.

[More details and caveats of the event inference in Reactome.](/electronic_inference_compara.html) For details on PANTHER see also: <http://www.pantherdb.org/about.jsp>

Biosynthesis of protectins ↗

Location: Biosynthesis of DHA-derived SPMs

Stable identifier: R-MMU-9018681

Inferred from: Biosynthesis of protectins (Homo sapiens)

This event has been computationally inferred from an event that has been demonstrated in another species.

The inference is based on the homology mapping from PANTHER. Briefly, reactions for which all involved PhysicalEntities (in input, output and catalyst) have a mapped orthologue/paralogue (for complexes at least 75% of components must have a mapping) are inferred to the other species. High level events are also inferred for these events to allow for easier navigation.

[More details and caveats of the event inference in Reactome.](/electronic_inference_compara.html) For details on PANTHER see also: <http://www.pantherdb.org/about.jsp>

Biosynthesis of maresins [↗](#)

Location: Biosynthesis of DHA-derived SPMs

Stable identifier: R-MMU-9018682

Inferred from: Biosynthesis of maresins (Homo sapiens)

This event has been computationally inferred from an event that has been demonstrated in another species.

The inference is based on the homology mapping from PANTHER. Briefly, reactions for which all involved PhysicalEntities (in input, output and catalyst) have a mapped orthologue/paralogue (for complexes at least 75% of components must have a mapping) are inferred to the other species. High level events are also inferred for these events to allow for easier navigation.
